

Smallest Mobile Phones in the World and Wrist Watch Phones

Number 1: Willcom WX06A

Just launched in Japan, the WX06A is **officially the world's smallest phone at just 32 x 70 x 10.7mm** and weighing in at **32 grams**. Due to the teeny tiny size of the phone it doesn't have a camera and talk time battery is just 2 hours. But you are still able to text, make calls and send emails – it even has a **fold out antenna** so you can get better signal. This little phone, which comes in black, white and pink, is only available in Japan at the moment and the price hasn't yet been revealed. The question is, will anyone be able to use the keys?!

Number 2: The Modu Mobile

Only recently beaten by the Willcom, The Modu Mobile was named by the Guinness Book of World Records as the World's Lightest Phone until 2013, the handset weighs **just over forty grams** and measures a mere **72 x 37 x 7.8 mm**. However, the Modu Mobile's diminutive size doesn't prevent it from performing most of the functions you need in a phone. It's able to make calls, send SMS messages, play MP3s and take photos. For some of these functions you may need to use attachments, bulking up the size a little, but this phone is still a wonder of micro design.

Number 3: The NEC N930

While the phones listed above may not occupy a place in the mainstream market, it would be difficult to find them on sale outside of specialist shops; the NEC N930 is probably the **smallest phone in the world that can be found in most phone shops**. Compared to the Modu Mobile this seems fairly large, but it still weighs in at a light **72 grams** and boasts dimensions measuring **85.5 x 54 x 11.9 mm**. Once again, the handset contains all the features you would expect and is incredibly stylishly designed. This phone has done reasonably well in terms of sales, not just because of its small size, but also because it looks great, runs well and contains everything the modern mobile phone user needs.

Number 4: The Xun Chi 138

The Xun Chi 138 is probably **one of the Modu Mobile's closest competitors** when it comes to size, but doesn't quite manage to beat it. The handset weighs just **55 grams** and utilises a touch screen that makes the most of fantastic handwriting recognition technology. As the handset is too small for a keypad, or a big enough touch keyboard, the handwriting recognition technology is incredibly important. The phone is difficult to get hold of in Europe and is **only really readily available in China**, where it has become quite popular. As usual, this tiny

phone has managed to cram in the technology necessary to run an MP3 player and camera, as well as a video recorder.

Number 5: CellWatch M500 Watch Phone

It has long been said that the next logical step for mobile telephones is to **move across to wearable technology** and the M500 Watch Phone is a perfect example of that possible transition. For those that love the idea of small cell phones the M500 is a fully-functional and wearable device that has the two-fold benefits of working as **a wristwatch and a mobile telephone**. It may not feature the standard form-factor of what we know and accept as a cell phone, but it certainly offers a unique approach to mobile technology.

Number 6: UTStarcom Slice

Inc.

The UTStarcom Slice doesn't have the naming appeal that other devices have and it certainly doesn't come close to being the smallest in terms of physical dimensions with its **109 x 46 x 10.2 form factor** but it does beat a lot of the competition with its lightweight shell. Weighing in at just **65 grams** the device is an example of a simple but functional phone with no bells and whistles. Designed with the most basic of mobile features in mind the Slice can be used simply for making and receiving calls.

Number 7: LG Migo

For those who require something that is small, quirky and offers the most basic feature set then the LG Migo should immediately jump to mind. Weighing in at **just under 70 grams** the Migo packs in calling and text messaging with a relatively unique and childlike design. In terms of weight and physical dimensions there are a number of devices that are a lot smaller but this is one of the **smallest handsets available** from one of the world's most immediately recognizable brands.

Number 8: Samsung SGH-E888

It won't actually officially claim the title of the world's smallest mobile telephone but the Samsung SGH-E888 claims the hearts of many small tech fans due to the fact that unlike a lot of the competition it is in wide use around the world. Weighing in around **85 grams** the E888 packs in **80MB of internal memory** and has the relatively minute **87 x 47 x 23mm dimensions**. Samsung have also taken the liberty of packing the device with an **embedded swivel camera** to give an effective use of that onboard memory.

Number 9: The Haier Elegance

This is the phone that **held the title of world's smallest phone before the Modu Mobile** came along and stole its crown. Weighing in at a slightly heavier **64 grams**, with measurements of **91 x 35 x 18 mm**, the Haier Elegance is over twice the thickness of the Modu Mobile, but still manages to surprise with its tiny design. Fulfilling all the functions necessary to be recognised as a proper mobile phone, this great piece of design is still one of the smallest phones in the world.

Number 10: Pantech C300

The emergence of smartphones has seen the mobile market move away from the flip phone or clamshell design that was once so popular but the Pantech C300 still holds the mantel as one of the world's smallest flip phones. Weighing in at **just over 70 grams** the C300 measures **3.4 x 1.7 x 0.8 inches** with the user trade-off being that consumers can expect pretty poor build quality to achieve the tiny size.

Number 11: Firefly Mobile

Not everyone is looking to purchase a top of the range smartphone. For parents who want their **kids to be safe and contactable** but require something small enough to be discreet then the Firefly Mobile is potentially the industry leader.

The rather dazzling device weighs in at approximately **60 grams** and offers a number of basic features that allows the user to **constantly stay in contact**. Once upon a time it may have been considered cutting edge of teen tech, but right now the Firefly Mobile is an example of a small and functional device that is affordable for most youngsters.

Wrist Watch Mobile Phones

Here is a list of the best wrist watch mobile phones on the market today, with details about their specifications, capabilities and options.

Watch cellphones are the ultimate gadget. Remember the old spy movies where our hero would call for help using his watch or take pictures of top secret documents with the camera hidden in his watch? Every boy dreamed of having one and now you can buy one for as low as \$80. The wrist watch mobile phones of today are equipped with touch screen, video camera, radio, dual SIM, Bluetooth connection, WAP, GPRS, GPS and expansion slot for Micro SD memory cards. Most of them are manufactured in China. Shown here are the top 10 wrist watch mobile phones.

10. Avatar ET-2

This watch cellphone was made after the movie Avatar. It has an odd name but don't let this fool you. This is a powerful wrist watch mobile phone featuring Dual SIM dual standby (using two SIM cards at the same time), built-in

Compass, 1.33 Inch touch screen, support extend card up to 8GB, Polyphonic / MP3 ring-tone, 3GP / MPEG4 recording and playback, 0.3 MP camera, Bluetooth, WAP and GPRS.

9. G2

This is a water resistant watch phone. It has 1.5 inch TFT touch screen. Other features are: Bluetooth answering and data transmission, supports MP3/MP4/Record function and a 2GB built-in memory. This version doesn't have a keypad which makes it smaller than the previous wrist watch mobile phone.

8. GD910 China manufacturer

The GD910 watch cellphone has a keypad and trackball and is the first ever key-press QUAD-band watch cellphone. It has 1.55 inch TFT touch-screen, Bluetooth 2.0, FM radio, supports voice dialing, equalizer, four loudspeakers with stereo output, larger volume and good sound quality. It also has 2MP camera, TF slot for memory add-on and video and sound recorder.

7. LG GD910

With the model GD910 LG is entering the wrist watch mobile phone market. It has TFT capacitive touchscreen with 256K colors, 3G, 1.3 MP camera, GPRS and EDGE. The LG GD910 is a great watch cellphone but lacks the capabilities of the Chinese counterparts.

6. MQ006

The MQ006 wrist watch mobile phone features a more classic design. But looks can be deceiving. Inside it's full with technology. It features 1.5" Samsung TFT touch screen, supports 2.0 stereo Bluetooth headsets, built-in 850 mA capacity battery, talking time is 2-3 hours, standby 150-300 hours and has a built-in 1.3 megapixel camera. A very nice phone that looks the same as an ordinary wrist watch, but just one touch over the screen and it turns into a piece of technological marvel.

5. MQ007

This MQ007 wrist watch mobile phone is perfect for the ladies. It features 1.5" TFT touch screen, with 1.30 megapixel camera, supports Bluetooth and W/Bluetooth headsets, MP3/MP4 Player, support TF Card up to 8GB and has language support for Chinese, English, Spanish, French and German.

4. MQ998

Another wrist watch mobile phone that looks just like an ordinary watch. The MQ998 has flat screen design with 1.5 inch TFT touch screen, 1.3 MP camera with video recording, Bluetooth function with support for Bluetooth headset and TF Card Slot for up to 2GB memory. It also has WAP and GPRS connectivity.

3. Q8

This watch cellphone has options like 2 SIM cards dual standby, 1.5 inch touch screen, FM radio, 3GP/MP4/MP3 playback, equalizer and supports Bluetooth stereo output. The Q8 has keypad for easy input and typing and touch pen for writing that is hidden behind the watch cellphone. But let's face it, the screen is too small to write on, so the only use for the pen is to use it instead of your fingers for dialing numbers directly from the screen.

2. W600

There are 3 different colors for this model. Its design is clean, which makes it desirable for a group of people who want to have wrist watch mobile phone but don't want to look like a geek. It has 1.5 TFT Touch Screen, video and photo player, voice recorder and FM radio. It is a Quad band watch phone supporting GSM850/900/1800/1900MHz bands. Built-in 1.3 megapixel camera and language support for English, French, Italian, Portuguese, Spanish, German, Russian, Arabic, English and Chinese.

1. Nokia Morph

This is a concept cellphone by Nokia. The Nokia Morph is the future of all cellphones. The whole phone can be bent in a form of a watch or a bracelet. This makes the phone easy to carry on your wrist. When you want to use the phone, just straighten it up and the whole phone turns into one big transparent touch screen. This technology is still in development but undoubtedly the future of the wrist watch mobile phone. This kind of watch cellphone would be the ultimate gadget and will combine fashion with technology like never before.

These recent touchscreen and keypad style cell phones have full functional capabilities of a digital watch with time, date and day display with programmable alarms, music, camera, photo shots, SMS Sending options and to do lists for keeping you on schedule and in style.

DRAGON AVATAR ET-2-Mobile Phone Watch

It is a Quadband 1.3 inch touch-screen watch-phone with Dual-SIM card slots. The Watch Phone has a built-in keypad and there is a Micro SD card as well as a 1.3 MP Camera. It is equipped with digital still and video camera. There are the MP3/MP4 media player functions and there is a bonus 4GB micro SD card and Bluetooth headset. The battery department has a rechargeable Li-ion Battery.

VEGA Android Phone Watch

It is the first Android smartphone watch on the market along with a 2.0 inches Capacitive touchscreen. It runs on the Android 2.2 OS and is equipped with cool Army Combat Camouflage pattern. The device has a 2MP camera and for storage there is a 8GB FREE TF card. There is a 800mAh capacity battery.

Aoke AK810 Mobile Touch Screen Watch

It has a 1.5 inch touch screen along with a single SIM card single standby. There is a built-in 505K memory expandable up to Micro SD card up to 2GB. The Mp3/mp4 player is enabled ah long with Tri-band cellphone. The device consists of a rechargeable Li-ion battery.

Kinsen Touchscreen Watch

The specs consist of a 1.8 inch touch screen along with a 0.3MP camera. There is a single SIM Slot as well as a TF card up to 8GB. The music formats include MP3 and WAV and there is a USB port as well.

Samsung's S9110 Touch Screen Watch Phone

This device comes with a 1.76 inch capacitive touch screen display enabled with network of GSM 900 / 1800 Mhz. The screen resolution is about 176 x 220 pixels. The watch has a dust & scratch resistant surface. It has 1000 phone-book memory as well as 40MB built-in memory

The Web browser is enabled with GPRS & EDGE connectivity and there is support for SMS,MMS and E-mail. An Mp3 player is installed along with polyphonic & mp3 ring tones. This goodie has a voice memo as well as the currency converter. The battery department is good with a 630mAh Li-ion battery.

<http://www.3gwatches.com/products.html>

Welcome to the future! The M500 is the world's smallest mobile watch.

Designed by SMS Technology Australia and developed by one of the worlds leading and most respected mobile research and design companies.

Blue Square Technologies (Pty) Ltd has been appointed by SMS Technology Australia to be the official distributors of the mobilewatch in Africa. The watch is approved on all international standards i.e. CE FCC and ROHS approved. The mobile watch also received ICASA approval on the 15th of June 2007. **ICASA approval number TA-2007/280.** The first units will be available from about 20 to 31 November 2007 from **Vodacom** from Vodaworld in Midrand.

Keeping time and keeping Contact will never be the same again. The M500 takes mobile communications to a whole new level. With over 80 hours standby time, full sms functionality, Touch Screen, full blue tooth compatibility, Dial Up Networking, Games, MP4 Player, 128 MB Memory, USB connectivity for software uploads, downloads, 300 number memory storage, 40 embedded real tones and its sleek sophisticated design make this the world's first truly mobile wristwatch.

Mini 3-in-1 Wrist Watch Cellphone and Invisible GPS Tracker #00253619

Mini 3-in-1 Wrist Watch Cellph...

USD \$ 176.00 ~~USD \$115.98~~

Quadband Wrist Watch Cell phon...

USD \$ 193.00 ~~USD \$105.98~~

Features

This 3-in-i GPS Wrist Watch Tracker combines cell phone, watch and GPS tracker in to one set. Due to its invisible GPS tracking function, it can be wildly used to protect children (kids and students), the elders and the disable. The most important is that it can be used for Anti-kidnapping because of its invisible built-in GPS Tracker that can not be found easily.

You can pre-set 3 phone numbers with the SIM card in, and it will send message to the preset numbers followed by dialing the three numbers after you press the SOS signals key, it will go to the listening status automatically after dial the phone number successfully. If you press and hold the key "call1" or "call2" or "call3" when the tracker standby, you can make a call respectively, and the call volume can be increase and decrease.

Specification

- 3-in-1 design: Watch+ Cell phone + Invisible GPS Tracker
- Build-in GPS Module
- Tiny size and fashionable outlook fits the like of children and elders.
- Invisible GPS tracking device inside make it be used for Anti-kidnapping too.
- Internet positioning service center, used to receive and send positioning information
- GSM /GPRS modem supports Quad frequency bands, i.e. 850/900/1800/1900 MHz
- High-sensitivity, new workmanship and the most advanced GPS chip
- Can work effectively in limited space such as urban canyon
- Low energy consumption
- Fast signal acquisition
- Supports single positioning and continuous tracking;
- Supports alarming and remote monitoring
- Supports fast dial button
- Supports the location information inquiry by SMS and Internet
- May monitor without disturbing the tracked person and realizes real-time tracking;
- Can position the holder by call or SMS
- In emergency, press the SOS button to have an accurate positioning
- GPS location accuracy: 15M
- GSM Network accuracy:200M
- GPS Band: 1575 MHz
- GSM Band:850/900/1800/1900 MHz
- LCD Module:1.44" TFT
- Function Buttons:Power,SoS,Call/Answer
- Battery:4.2V DC/750mAh
- Standby consumption: 1to 3mA
- GPS connecting: 70mA

- Standby Time:7 days
- Continuous monitoring: 8-10 hours
- Hot start time: about 3 seconds
- Warm start time: about 15 seconds
- Cold start time: $\approx 60\text{s}$(Autonomous)
- Working humidity: 5% to 95%
- Storage temperature: -45° to $+90^{\circ}$
- Restrictive working temp: -40° or 80°
- In retail packaging.

Additional Features

- 1 x Watch Tracker
- 1 x Manual
- 1 x Adapter
- 1 x USB Cable

W100 wrist-watch mobile phone

Not unlike the personal jet-pack, the wrist-watch phone is one of those inspired ideas that captured the public

imagination long before it had a chance to become a technological or commercial reality. Now China's Qiao Xing Mobile has announced the launch of its wrist-watch mobile phone, the W100, which features a 65k TFT-LCD touch screen, 1GB T-flash extendable memory built in, FM radio and a 1.3 megapixel camera.

The W100 features:

65k TFT-LCD touch screen 1GB T-flash extendable memory, multi-media & connectivity functions including MP3, Mpeg4, instant messaging, Blue tooth, and a surround sound Bluetooth headset FM radio- /The W100 offers a built-in FM radio; 1.3 megapixel camera 7 available colors
